NAME

MagickWand-config - get information about the installed version of the Magick Wand

SYNOPSIS

MagickWand-config [--cflags] [--cppflags] [--exec-prefix] [--ldflags] [--libs] [--prefix] [--version]

DESCRIPTION

MagickWand-config prints the compiler and linker flags required to compile and link programs that use the **Wand** Application Programmer Interface.

EXAMPLES

To print the version of the installed distribution of **Wand**, use:

  MagickWand-config --version

To compile a program that calls the **Wand** Application Programmer Interface, use:

  cc 'MagickWand-config --cflags --cppflags --ldflags --libs' program.c

OPTIONS

--cflags

Print the compiler flags that were used to compile **libWand**.

--cppflags

Print the preprocessor flags that are needed to find the **Wand** C include files and defines to ensure that the Wand data structures match between your program and the installed libraries.

--exec-prefix

Print the directory under which target specific binaries and executables are installed.

--ldflags

Print the linker flags that are needed to link with the **Wand** library.

--libs

Print the linker flags that are needed to link a program with **libWand**.

--version

Print the version of the **Wand** distribution to standard output.
