NAME

SPI_copytuple - make a copy of a row in the upper executor context

SYNOPSIS

HeapTuple SPI_copytuple(HeapTuple *row*)

DESCRIPTION

SPI_copytuple makes a copy of a row in the upper executor context. This is normally used to return a modified row from a trigger. In a function declared to return a composite type, use **SPI_returntuple** instead.

This function can only be used while connected to SPI. Otherwise, it returns NULL and sets *SPI_result* to SPI_ERROR_UNCONNECTED.

ARGUMENTS

HeapTuple *row*
    row to be copied

RETURN VALUE

the copied row, or NULL on error (see *SPI_result* for an error indication)
