

NAME

SPI_cursor_move - move a cursor

SYNOPSIS

void SPI_cursor_move(*Portal portal*, bool *forward*, long *count*)

DESCRIPTION

SPI_cursor_move skips over some number of rows in a cursor. This is equivalent to a subset of the SQL command **MOVE** (see **SPI_scroll_cursor_move** for more functionality).

ARGUMENTS

Portal *portal*

portal containing the cursor

bool *forward*

true for move forward, false for move backward

long *count*

maximum number of rows to move

NOTES

Moving backward may fail if the cursor's plan was not created with the **CURSOR_OPT_SCROLL** option.
