

NAME

XFree - free client data

SYNTAX

```
int XFree(void *data);
```

ARGUMENTS

data Specifies the data that are to be freed.

DESCRIPTION

The **XFree** function is a general-purpose Xlib routine that frees the specified data. You must use it to free any objects that were allocated by Xlib, unless an alternate function is explicitly specified for the object.

If data is NULL, no operation is performed.
