

NAME

`XcupGetReservedColormapEntries` - list colormap entries reserved by the system

SYNOPSIS

```
cc [flag ...] file ... -lXext [ library ... ]  
#include <X11/extensions/Xcup.h>
```

```
Status XcupGetReservedColormapEntries(Display *display,  
int screen, XColor **colors_out, int *ncolors);
```

ARGUMENTS

display Specifies the connection to the X server.

screen Screen number on the host server.

colors_out Returns the values reserved by the server.

ncolors Returns the number of items in *colors_out*.

DESCRIPTION

The `XcupGetReservedColormapEntries` function returns a list of colormap entries (pixels) that are reserved by the system. This list will, at a minimum, contain entries for the `BlackPixel` and `WhitePixel` of the specified screen. Use `XFree` to free *colors_out*.

To minimize colormap flash, an application which installs its own private colormap should query the special colors by calling `XCupGetReservedColormapEntries`, and can then store those entries (in the proper location) in its private colormap using `XCupStoreColors`.
