NAME

XkbAddSymInterpret - Add a symbol interpretation to the list of symbol interpretations in an XkbCompatRec

SYNOPSIS

XkbSymInterpretPtr XkbAddSymInterpret (XkbDescPtr *xkb***, XkbSymInterpretPtr** *si***, Bool** *updateMap***, XkbChangesPtr** *changes***);**

ARGUMENTS

xkb keyboard description to be updated

si symbol interpretation to be added

updateMap
　　True=>apply compatibility map to keys

changes
　　changes are put here

DESCRIPTION

XkbAddSymInterpret adds *si* to the list of symbol interpretations in *xkb.* If *updateMap* is True, it (re)applies the compatibility map to all of the keys on the keyboard. If *changes* is non-NULL, it reports the parts of the keyboard that were affected (unless *updateMap* is True, not much changes). *XkbAddSymInterpret* returns a pointer to the actual new symbol interpretation in the list or NULL if it failed.
