

**NAME**

XkbComputeSectionBounds - Update the bounding box of a section

**SYNOPSIS**

**Bool XkbComputeSectionBounds (XkbGeometryPtr *geom*, XkbSectionPtr *section*);**

**ARGUMENTS**

*geom*

geometry that contains the section

*section*

section to be examined and updated

**DESCRIPTION**

If you add or delete a row to or from a section, or if you change the geometry of any of the rows in that section, you may need to update the bounding box for that section.

*XkbComputeSectionBounds* examines all the rows of the *section* and updates the bounding box of that section so that it contains all rows. *XkbComputeSectionBounds* returns False if any of the arguments is NULL; otherwise, it returns True.
