

**NAME**

XkbFindOverlayForKey - Find the alternate name by using the primary name for a key that is part of an overlay

**SYNOPSIS**

**char \* XkbFindOverlayForKey (XkbGeometryPtr *geom*, XkbSectionPtr *section*, \_Xconst char \**under*);**

**ARGUMENTS**

*geom*

geometry that contains the section

*section*

section to be searched for matching keys

*under*

primary name of the key to be considered

**DESCRIPTION**

Keys that can generate multiple keycodes may be associated with multiple names. Such keys have a primary name and an alternate name.

*XkbFindOverlayForKey* uses the primary name of the key, *under*, to look up the alternate name, which it returns.
