

NAME

XkbFreeKeyboard - Destroys either an entire XkbDescRec or just some of its members

SYNOPSIS

```
void XkbFreeKeyboard (XkbDescPtr xkb, unsigned int which, Bool free_all);
```

ARGUMENTS

xkb keyboard description with components to free

which

mask selecting components to free

free_all

True => free all components and *xkb*

DESCRIPTION

XkbFreeKeyboard frees the components of *xkb* specified by *which* and sets the corresponding values to NULL. If *free_all* is True, *XkbFreeKeyboard* frees every non-NULL component of *xkb* and then frees the *xkb* structure itself.

If *kbd* is NULL, no operation is performed.
