NAME

XkbGetDeviceInfoChanges - Query the changes that have occurred in the button actions or indicator names and indicator maps associated with an input extension device

SYNOPSIS

Status XkbGetDeviceInfoChanges (Display *_dpy_**, XkbDeviceInfoPtr** _device_info_**,**
　　XkbDeviceChangesPtr _changes_**);**

ARGUMENTS

dpy connection to X server

_device_info_
　　structure to update with results

changes
　　contains notes of changes that have occurred

DESCRIPTION

The _changes->changed_ field indicates which attributes of the device specified in _changes->device_ have changed. The parameters describing the changes are contained in the other fields of _changes._ _XkbGetDeviceInfoChanges_ uses that information to call _XkbGetDeviceInfo_ to obtain the current status of those attributes that have changed. It then updates the local description of the device in _device_info_ with the new information.
