NAME

XkbGetDeviceInfoChanges - Query the changes that have occurred in the button actions or indicator names and indicator maps associated with an input extension device

SYNOPSIS

Status XkbGetDeviceInfoChanges (Display **dpy***, XkbDeviceInfoPtr** *device_info***,**
XkbDeviceChangesPtr *changes***);**

ARGUMENTS

dpy connection to X server

device_info
structure to update with results

changes
contains notes of changes that have occurred

DESCRIPTION

The *changes->changed* field indicates which attributes of the device specified in *changes->device* have changed. The parameters describing the changes are contained in the other fields of *changes.* *XkbGetDeviceInfoChanges* uses that information to call *XkbGetDeviceInfo* to obtain the current status of those attributes that have changed. It then updates the local description of the device in *device_info* with the new information.
