NAME

XkbKeysymToModifiers - Finds the set of modifiers bound to a particular keysym on the core keyboard

SYNOPSIS

unsigned int XkbKeysymToModifiers (**Display ****dpy***, KeySym** *ks***);**

ARGUMENTS

dpy connection to X server

ks   keysym of interest

DESCRIPTION

XkbKeysymToModifiers finds the set of modifiers currently bound to the keysym *ks* on the core keyboard. The value returned is the mask of modifiers bound to the keysym *ks.* If no modifiers are bound to the keysym, *XkbKeysymToModifiers* returns zero; otherwise, it returns the inclusive OR of zero or more of the following: ShiftMask, ControlMask, LockMask, Mod1Mask, Mod2Mask, Mod3Mask, Mod4Mask, and Mod5Mask.
