NAME
   XkbLatchGroup - Latches the keysym group

SYNOPSIS
   Bool XkbLatchGroup (Display **display**, **unsigned int** *device_spec*, **unsigned int** *group***);**

ARGUMENTS
   display
       connection to the X server

   device_spec
       device ID, or XkbUseCoreKbd

   group
       index of the keysym group to latch

DESCRIPTION
   XkbLatchGroup sends a request to the server to latch the specified *group* and does not wait for a reply.
   It returns True if the request was sent and False otherwise.

   Reference the keysym group indices with these symbolic constants:
