NAME

   XkbSASetGroup - Sets the group_XXX field of act from the group index grp

SYNOPSIS

   void XkbSASetGroup (XkbAction *act***, int** *grp***);**

ARGUMENTS

   act action from which to set group

   grp group index to set in group_XXX

DESCRIPTION

   XkbSASetGroup sets the *group_XXX* field of *act* from the group index *grp.*

STRUCTURE

   Actions associated with the XkbGroupAction structure change the current group state when keys are
   pressed and released:

```
   typedef struct _XkbGroupAction {
      unsigned char   type;      /* XkbSA_{Set|Latch|Lock}Group */
      unsigned char   flags;     /* with type, controls the effect on groups */
      char            group_XXX; /* represents a group index or delta */
   } XkbGroupAction;
```
