

**NAME**

XtAppGetErrorDatabase, XtAppGetErrorDatabaseText - obtain error database

**SYNTAX**

```
#include <X11/Intrinsic.h>
```

```
XrmDatabase *XtAppGetErrorDatabase(XtAppContext app_context);
```

```
void XtAppGetErrorDatabaseText(XtAppContext app_context, const char *name, const char *type,  
    const char *class, const char *defaultMsg, char *buffer_return, int nbytes, XrmDatabase database);
```

**ARGUMENTS**

*app\_context* Specifies the application context.

*buffer\_return* Specifies the buffer into which the error message is to be returned.

*class* Specifies the resource class of the error message.

*database* Specifies the name of the alternative database that is to be used or NULL if the application's database is to be used.

*defaultMsg* Specifies the default message to use.

*name*

*type* Specifies the name and type that are concatenated to form the resource name of the error message.

*nbytes* Specifies the size of the buffer in bytes.

**DESCRIPTION**

The **XtAppGetErrorDatabase** function returns the address of the error database. The Intrinsics do a lazy binding of the error database and do not merge in the database file until the first call to **XtAppGetErrorDatabaseText**.

The **XtAppGetErrorDatabaseText** returns the appropriate message from the error database or returns the specified default message if one is not found in the error database.
