

**NAME**

XtCreateApplicationShell - create top-level widget instance

**SYNTAX**

```
#include <X11/Intrinsic.h>
```

```
Widget XtCreateApplicationShell(const char *name, WidgetClass widget_class, ArgList args, Cardinal num_args);
```

**ARGUMENTS**

*name* Specifies the name of the shell.

*args* Specifies the argument list to override any other resource specifications.

*num\_args* Specifies the number of arguments in the argument list.

**DESCRIPTION**

The procedure **XtCreateApplicationShell** calls **XtAppCreateShell** with the *application* NULL, the application class passed to **XtInitialize**, and the default application context created by **XtInitialize**. This routine has been replaced by **XtAppCreateShell**.
