NAME
　　XtOwnSelection, XtOwnSelectionIncremental, XtDisownSelection - set selection owner

SYNTAX
　　#include <X11/Intrinsic.h>

　　Boolean XtOwnSelection(Widget *w*, Atom *selection*, Time *time*, XtConvertSelectionProc
　　　　convert_proc, XtLoseSelectionProc *lose_selection*, XtSelectionDoneProc *done_proc*);

　　Boolean XtOwnSelectionIncremental(Widget *w*, Atom *selection*, Time *time*,
　　　　XtConvertSelectionIncrProc *convert_callback*, XtLoseSelectionIncrProc *lose_callback*,
　　　　XtSelectionDoneIncrProc *done_callback*, XtCancelConvertSelectionProc *cancel_callback*,
　　　　XtPointer *client_data*);

　　void XtDisownSelection(Widget *w*, Atom *selection*, Time *time*);

ARGUMENTS
　　convert_proc　　Specifies the procedure that is to be called whenever someone requests the current
　　　　　　　　　　value of the selection.

　　done_proc　　　Specifies the procedure that is called after the requestor has received the selection or
　　　　　　　　　　NULL if the owner is not interested in being called back.

　　lose_selection　Specifies the procedure that is to be called whenever the widget has lost selection
　　　　　　　　　　ownership or NULL if the owner is not interested in being called back.

　　selection　　　Specifies an atom that describes the type of the selection (for example,
　　　　　　　　　　XA_PRIMARY, **XA_SECONDARY**, or **XA_CLIPBOARD**).

　　time　　　　　Specifies the timestamp that indicates when the selection ownership should commence
　　　　　　　　　　or is to be relinquished.

　　w　　　　　　Specifies the widget that wishes to become the owner or to relinquish ownership.

DESCRIPTION
　　The **XtOwnSelection** function informs the Intrinsics selection mechanism that a widget believes it
　　owns a selection. It returns **True** if the widget has successfully become the owner and **False** otherwise.
　　The widget may fail to become the owner if some other widget has asserted ownership at a time later
　　than this widget. Note that widgets can lose selection ownership either because someone else asserted
　　later ownership of the selection or because the widget voluntarily gave up ownership of the selection.

Also note that the lose_selection procedure is not called if the widget fails to obtain selection ownership in the first place.

The **XtOwnSelectionIncremental** procedure informs the Intrinsics incremental selection mechanism that the specified widget wishes to own the selection. It returns **True** if the specified widget successfully becomes the selection owner or **False** otherwise. For more information about *selection*, *target*, and *time*, see Section 2.6 of the *Inter-Client Communication Conventions Manual*.

A widget that becomes the selection owner using **XtOwnSelectionIncremental** may use **XtDisownSelection** to relinquish selection ownership.

The **XtDisownSelection** function informs the Intrinsics selection mechanism that the specified widget is to lose ownership of the selection. If the widget does not currently own the selection either because it lost the selection or because it never had the selection to begin with, **XtDisownSelection** does nothing.

After a widget has called **XtDisownSelection**, its convert procedure is not called even if a request arrives later with a timestamp during the period that this widget owned the selection. However, its done procedure will be called if a conversion that started before the call to **XtDisownSelection** finishes after the call to **XtDisownSelection**.
