NAME

   audit_warn - alert when audit daemon issues warnings

DESCRIPTION

   The **audit_warn** script runs when auditd(8) generates warning messages.

   The default **audit_warn** is a script whose first parameter is the type of warning; the script appends its
   arguments to */etc/security/audit_messages*. Administrators may replace this script: a more
   comprehensive one would take different actions based on the type of warning. For example, a low-
   space warning could result in an email message being sent to the administrator.

FILES

   /etc/security/audit_warn
   /etc/security/audit_messages

SEE ALSO

   audit(4), auditd(8)

HISTORY

   The OpenBSM implementation was created by McAfee Research, the security division of McAfee Inc.,
   under contract to Apple Computer Inc. in 2004. It was subsequently adopted by the TrustedBSD Project
   as the foundation for the OpenBSM distribution.

AUTHORS

   This software was created by McAfee Research, the security research division of McAfee, Inc., under
   contract to Apple Computer Inc. Additional authors include Wayne Salamon, Robert Watson, and
   SPARTA Inc.

   The Basic Security Module (BSM) interface to audit records and audit event stream format were defined
   by Sun Microsystems.
