NAME

beep - play a beep sound

SYNOPSIS

beep [-**F** *frequency*] [-**D** *duration_ms*] [-**r** *sample_rate_hz*] [-**d** *oss_device*] [-**g** *gain*] [-**B**] [-**h**]

DESCRIPTION

The **beep** utility is used to playback a beep on the soundcard.

The options are as follows:

-F   Sets the center frequency of the beep in Hz. The default is 440 Hz .

-D   Sets the duration of the beep in milliseconds. The default is 150 ms .

-d   Sets the soundcard to use. The default is /dev/dsp .

-r   Sets the soundcard samplerate in Hz. The default is 48000 Hz.

-g   Sets the waveform gain, between 0 and 100 inclusively. The default is 75.

-B   Runs the **beep** utility in the background.

-h   Display summary of options.

EXAMPLES

Playback default beep sound using /dev/dsp .

        $ beep
