

NAME

bus_delayed_attach_children - request that the children be attached when interrupts are enabled

SYNOPSIS

```
#include <sys/param.h>
```

```
#include <sys/bus.h>
```

int

```
bus_delayed_attach_children(device_t dev);
```

DESCRIPTION

The **bus_delayed_attach_children()** function requests that the children of this device be attached when interrupts are running. If interrupts are currently running, this happens immediately. If interrupts are not yet running, this happens after interrupts are enabled, but before the system mounts root.

RETURN VALUES

A zero return value indicates success.

SEE ALSO

bus(9), device(9), driver(9)
