

NAME

c2s - client-to-server connector

SYNOPSIS

c2s [-h] [-c *config*] [-D]

DESCRIPTION

c2s accepts incoming connections from clients, performs authentication and registration functions, and communicates with the session manager on their behalf.

OPTIONS

- h** Show summary of options.
- c** Alternate configuration file to use. The compiled-in default is /usr/local/etc/jabberd/c2s.xml.
- D** Print debugging output. You should configure jabberd with the --enable-debug switch to enable this.
