NAME

    cancel - cancel jobs

SYNOPSIS

    cancel [**-h** *hostname[:port]*] [**-E**] [**-U** *username*] [**-a**] [**-u** *username*] [**-x**] [*id*] [*destination*] [*destination-id*]

DESCRIPTION

    The **cancel** command cancels print jobs. If no *destination* or *id* is specified, the currently printing job on the default destination is canceled.

OPTIONS

    The following options are recognized by **cancel**:

    -a   Cancel all jobs on the named destination, or all jobs on all destinations if none is provided.

    -E   Forces encryption when connecting to the server.

    -h *hostname*[*:port*]
        Specifies an alternate server. Note: This option must occur before all others.

    -U *username*
        Specifies the username to use when connecting to the server.

    -u *username*
        Cancels jobs owned by *username*.

    -x   Deletes job data files in addition to canceling.

CONFORMING TO

    Unlike the System V printing system, CUPS allows printer names to contain any printable character except SPACE, TAB, "/", or "#". Also, printer and class names are *not* case-sensitive.

EXAMPLES

    Cancel the current print job:

        cancel

    Cancel job "myprinter-42":

     cancel myprinter-42

    Cancel all jobs:

     cancel -a

NOTES

    Administrators wishing to prevent unauthorized cancellation of jobs via the *-u* option should require authentication for Cancel-Jobs operations in **cupsd.conf**(5).
