NAME

    ck-history - ConsoleKit history

SYNOPSIS

    ck-history [--**frequent**] [--**help**] [--**last**] [--**last-compat**] [--**log**] [--**seat**=*seat*] [--**session-type**=*type*]
    [--**user**=*user*] [--**version**]

DESCRIPTION

    ck-history is a utility that provides information from the ConsoleKit database about what users have
    logged into the system. It supports options to specify whether to provide information about users who
    have logged in most frequently or most recently.

    The **ck-history** utility is used by **gdm**(1m) when the GDM Face Browser is enabled to display users in
    the order of frequency.

OPTIONS

    The following options are supported:

    --frequent

                Show listing of logged-in users in the most frequent order.

    -h, --**help**

                Display detailed usage message.

    --last

                Show listing of all user logins since logging began in the most-
                recent order..

    --last-compat

                Show listing of logged-in users in the most-recent order. The
                output is displayed in **last**(1) compatible format.

--log

Show full ConsoleKit event log.

-s, **--seat**=*seat*

Show entries for the specified *seat*.

-t, **--session-type**=*type*

Show entries for the specified session *type*.

-u, **--user**=*user*

Show entries for the specified *user*.

-V, **--version**

Display the version of the **ck-history** application.

EXAMPLES
Example 1: Show most frequently logged in users

example% **ck-history --frequent**

Example 2: Show the entire ConsoleKit log.

example% **ck-history --log**
