NAME
device_delete_children - delete all child devices of a given device

SYNOPSIS
#include <sys/param.h>
#include <sys/bus.h>

int
device_delete_children(*device_t dev*);

DESCRIPTION
The **device_delete_children**() function deletes all child devices of the given device *dev*, if any, using the **device_delete_child**() function for each device it finds. If a child device cannot be deleted, this function will return an error code.

RETURN VALUES
Zero is returned on success, a non-zero return value indicates failure.

SEE ALSO
