NAME

device_find_child - search for a child of a device

SYNOPSIS

#include <sys/param.h>
#include <sys/bus.h>

device_t
device_find_child(*device_t dev*, *const char *classname*, *int unit*);

DESCRIPTION

This function looks for a specific child of dev with the given *classname* and *unit*. If *unit* is -1, it returns the first child of *dev* with a matching *classname* (that is, the one with the lowest unit).

RETURN VALUES

If it exists, the child device is returned, otherwise NULL.

SEE ALSO

device_add_child(9)
