

NAME

device_printf - formatted output conversion

SYNOPSIS

```
#include <sys/param.h>
```

```
#include <sys/bus.h>
```

int

```
device_printf(device_t dev, const char *fmt, ...);
```

DESCRIPTION

The **device_printf**() function is a convenience interface to the **printf**(9) function. It outputs the name of the *dev* device, followed by a colon and a space, and then what **printf**(9) would print if you passed *fmt* and the remaining arguments to it.

RETURN VALUES

The **device_printf**() function returns the number of characters displayed.
