NAME

    dga - test program for the XFree86-DGA extension

SYNOPSIS

    dga

DESCRIPTION

    Dga is a simple test client for the XFree86-DGA extension. It fills the screen with a different colour
    for each key pressed. It prints some basic framebuffer parameters, and also keyboard and pointer
    events to stdout. To exit, hit the 'q' key. Hitting the 'b' key runs a simple benchmark, measuring raw
    framebuffer write and read speed (this takes one second each).
