

**NAME**

`djvm` - Manipulate bundled multi-page DjVu documents.

**SYNOPSIS****Creating a bundled document:**

`djvm -c[reate] doc.djvu page1.djvu ... pageN.djvu`

**Inserting:**

`djvm -i[nsert] doc.djvu page.djvu [pagenum]`

**Removing:**

`djvm -d[elete] doc.djvu pagenum`

**Listing:**

`djvm -l[ist] doc.djvu`

**DESCRIPTION**

This program creates or modifies a bundled multi-page DjVu document. Multi-page bundled documents can be used directly or converted to indirect document using command **djvmcvt**.

**OPTIONS****-c[reate]**

Create a bundled DjVu document named *doc.djvu* by collecting files *page1.djvu* to *pageN.djvu*.

**-i[nsert]**

Modify the bundled DjVu document named *doc.djvu* by inserting file *page.djvu* as page *pagenum*. Omitting argument *pagenum* means that the page should be appended at the end of the document. File *page.djvu* also can be a multi-page DjVu document. All pages will be inserted at the specified location.

**-d[elete]**

Remove page *pagenum* from the bundled multi-page DjVu document *doc.djvu*.

**-l[ist]**

List all component files in the multi-page DjVu document *doc.djvu*.

**CREDITS**

This program was initially written by Andrei Erofeev <andrew\_erofeev@yahoo.com> and was improved by Bill Riemers <docbill@sourceforge.net> and many others.
