

NAME

dwarf_reset_section_bytes - reset the internal state of a producer instance

LIBRARY

DWARF Access Library (libdwarf, -ldwarf)

SYNOPSIS

```
#include <libdwarf.h>
```

void

```
dwarf_reset_section_bytes(Dwarf_P_Debug dbg);
```

DESCRIPTION

Function **dwarf_reset_section_bytes**() resets the internal state of a DWARF producer instance, so that the next call to the function **dwarf_get_section_bytes**(3) will return the byte stream for the first generated section, and the next call to the function **dwarf_get_relocation_info**(3) will return the first relocation array for the DWARF producer instance.

Argument *dbg* should reference a DWARF producer instance allocated using **dwarf_producer_init**(3) or **dwarf_producer_init_b**(3).

RETURN VALUES

Function **dwarf_reset_section_bytes**() has no return value.
