

NAME

epiphany - a simple, clean, beautiful view of the web

SYNOPSIS

epiphany [*OPTION...*] [url]

DESCRIPTION

epiphany is the codename of GNOME Web, the web browser designed for the GNOME desktop and elementary OS. It offers a simple, clean, beautiful view of the web featuring first-class GNOME and Pantheon desktop integration, using WebKitGTK for web rendering.

OPTIONS**--new-window**

Open a new browser window instead of a new tab

-l, --load-session=FILE

Load the given session state file

-i, --incognito-mode

Start an instance with user data read-only

-p, --private-instance

Start a private instance with separate user data

-a, --application-mode[=BASENAME]

Start a private instance in web application mode (requires passing either desktop file basename or **--profile**)

--automation-mode

Start a private instance for WebDriver control

--profile=FILE

Custom profile directory for private instance (optional)

--search [TERM]

Initiate search with given search term

-, --help

Show help options

--version

Show version

Epiphany has a comprehensive help system. Run the browser and select **Help** from the menu.
