

NAME

exrmakepreview - generate exr preview thumbnail images

SYNOPSIS

exrmakepreview [*options*] *infile outfile*

DESCRIPTION

Read an OpenEXR image from *infile*, generate a preview image, add it to the image's header, and save the result in *outfile*. *Infile* and *outfile* must not refer to the same file (the program cannot edit an image file "in place").

OPTIONS

-w *x*

sets the width of the preview image to *x* pixels (default is 100)

-e *s* adjusts the preview image's exposure by *s* f-stops (default is 0). Positive values make the image brighter, negative values make it darker.

-v verbose mode

-h, --help

print this message

--version print version information

REPORTING BUGS
