

NAME

`fc-conflist` - list the configuration files processed by Fontconfig

SYNOPSIS

`fc-conflist [-Vh]`

`[--version] [--help]`

DESCRIPTION

`fc-conflist` prints an annotated list of all the configuration files processed by Fontconfig.

The output is a '-' or '+' depending on whether the file is ignored or processed, a space, the file's path, a colon and space, and the description from the file or 'No description' if none is present.

The order of files looks like how fontconfig actually process them except one contains `<include>` element. In that case, it will be shown after processing all the sub directories where is targeted by `<include>`.

OPTIONS

This program follows the usual GNU command line syntax, with long options starting with two dashes ('-'). A summary of options is included below.

`-V` Show version of the program and exit.

`-h` Show summary of options.

RETURN CODES

`fc-conflist` returns error code 0 for successful parsing, or 1 if any errors occurred or if at least one font face could not be opened.
