

NAME

filestat() - copies file descriptor information to buffer

SYNOPSIS

```
#include <schily/stat.h>
```

```
int filestat(f,buf)
```

```
FILE *f;
```

```
struct stat *buf;
```

DESCRIPTION

filestat() places system dependent information about the file *f* into the buffer *buf*.

RETURNS

Returns a value equal to or greater than zero when successful. Otherwise, returns -1 and sets the standard error code.

NOTES

The size and the interpretation of the buffer is system dependent.
