NAME

flowctl - ng_netflow(4) control utility

SYNOPSIS

flowctl [**-d** *level*] *path command*

DESCRIPTION

The **flowctl** utility is intended to control the ng_netflow(4) nodes. It has a single option:

-d *level*   Set the netgraph(3) debugging level to *level*.

COMMANDS

Currently, **flowctl** supports only one command.

show [**ipv4**|**ipv6**] [**human**|**verbose**]

> This command is the analog of the "show ip cache flow" command of a Cisco router. It dumps
> the contents of the flow cache in Cisco-like format. Specifying either **ipv4** or **ipv6** would extract
> only IPv4 or IPv6 flows respectively. It has optional parameter **verbose**, which is analog of the
> "show ip cache verbose flow" command. Additionally, **human** parameter can be specify to show
> selected flows in human-readable format.

EXIT STATUS

The **flowctl** utility exits 0 on success, and >0 if an error occurs.
