

NAME

gelf_getsymshndx, **gelf_update_symshndx** - read and update symbol information using extended section indices

LIBRARY

ELF Access Library (libelf, -lelf)

SYNOPSIS

```
#include <gelf.h>
```

```
GElf_Sym *
```

```
gelf_getsymshndx(Elf_Data *symdata, Elf_Data *xndxdata, int ndx, GElf_Sym *sym,  
                 Elf32_Word *xndxptr);
```

```
int
```

```
gelf_update_symshndx(Elf_Data *symdata, Elf_Data *xndxdata, int ndx, GElf_Sym *sym,  
                    Elf32_Word xndx);
```

DESCRIPTION

These functions are analogous to **gelf_getsym()** and **gelf_update_sym()** respectively, but are capable of handling symbol tables using extended section numbering.

Argument *symdata* is an *Elf_Data* descriptor associated with a section of type SHT_SYMTAB.

Argument *xndxdata* is an *Elf_Data* descriptor associated with a section of type SHT_SYMTAB_SHNDX. Argument *ndx* is the index of the symbol table entry being retrieved or updated. Argument *sym* is a pointer to a class-independent *GElf_Sym* structure. *GElf_Sym* structures are described in detail in [gelf\(3\)](#).

Function **gelf_getsymshndx()** retrieves symbol information at index *ndx* from the data descriptor specified by argument *symdata* and stores in class-independent form in argument *sym*. In addition it retrieves the extended section index for the symbol from data buffer *xndxdata* and stores it into the location pointed to by argument *xndxptr*.

Function **gelf_update_symshndx()** updates the underlying symbol table entry in data descriptor *symdata* with the information in argument *sym*. In addition it sets the extended section index in data buffer *xndxdata* to the value of argument *xndx*.

RETURN VALUES

Function **gelf_getsymshndx()** returns the value of argument *sym* if successful, or NULL in case of an error.

Function **`gelf_update_symshndx()`** returns a non-zero value if successful, or zero in case of an error.

ERRORS

These functions may fail with the following errors:

[ELF_E_ARGUMENT]

Arguments *symdata*, *xndxdata*, *xndxptr* or *sym* were NULL.

[ELF_E_ARGUMENT]

Argument *ndx* was less than zero, or too large for either of descriptors *symdata* or *xndxdata*.

[ELF_E_ARGUMENT]

Data descriptor *symdata* was not associated with a section of type SHT_SYMTAB.

[ELF_E_ARGUMENT]

Data descriptor *xndxdata* was not associated with a section of type SHT_SYMTAB_SHNDX.

[ELF_E_ARGUMENT]

Data descriptor *symdata* and *xndxdata* were associated with different ELF objects.

[ELF_E_VERSION]

The *Elf_Data* descriptors denoted by arguments *symdata* and *xndxdata* are associated with an ELF object with an unsupported version.
