

NAME

getargerror() - convert arg parsing error code to a string

SYNOPSIS

```
#include <schily/getargs.h>
```

```
char *getargerror(val)
    int val;    /* error code */
```

DESCRIPTION

getargerror() returns a string that matches the return code of the argument parsing routines.

RETURNS

A string that matches the return code or the string **Illegal arg error** in case that a nonexisting return code has been passed.

The codes **FLAGPARSED** and **NOTAFLAG** share the same value, but **FLAGPARSED** is not returned to external callers.

SEE ALSO

getargs(3), **getallargs(3)**, **getfiles(3)**.

BUGS

None currently known.

Mail bugs and suggestions to schilytools@mlists.in-berlin.de or open a ticket at <https://codeberg.org/schilytools/schilytools/issues>.
