NAME

git-sh-i18n--envsubst - Git's own envsubst(1) for i18n fallbacks

SYNOPSIS

```
eval_gettext () {
    printf "%s" "$1" | (
        export PATH $(git sh-i18n--envsubst --variables "$1");
        git sh-i18n--envsubst "$1"
    )
}
```

DESCRIPTION

This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the plumbing scripts and/or are writing new ones.

git sh-i18n--envsubst is Git's stripped-down copy of the GNU **envsubst(1)** program that comes with the GNU gettext package. It's used internally by **git-sh-i18n**(1) to interpolate the variables passed to the **eval_gettext** function.

No promises are made about the interface, or that this program won't disappear without warning in the next version of Git. Don't use it.
