

**NAME**

`git-version` - Display version information about Git

**SYNOPSIS**

`git version` [--build-options]

**DESCRIPTION**

With no options given, the version of *git* is printed on the standard output.

Note that **git --version** is identical to **git version** because the former is internally converted into the latter.

**OPTIONS**

--build-options

Include additional information about how git was built for diagnostic purposes.
