NAME

gnutls_record_disable_padding - API function

SYNOPSIS

#include <gnutls/gnutls.h>

void gnutls_record_disable_padding(gnutls_session_t *session***);**

ARGUMENTS

gnutls_session_t session

is a **gnutls_session_t** type.

DESCRIPTION

Used to disabled padding in TLS 1.0 and above. Normally you do not need to use this function, but there are buggy clients that complain if a server pads the encrypted data. This of course will disable protection against statistical attacks on the data.

This function is defunct since 3.1.7. Random padding is disabled by default unless requested using **gnutls_record_send_range**().

REPORTING BUGS

Report bugs to <bugs@gnutls.org>.
