NAME

gslp - Format and print text using ghostscript

gsbj - Format and print text for BubbleJet printer using ghostscript

gsdj - Format and print text for DeskJet printer using ghostscript

gsdj500 - Format and print text for DeskJet 500 BubbleJet using ghostscript

gslj - Format and print text for LaserJet printer using ghostscript

SYNOPSIS

gslp -12BclqRr -b<header> -f<font> -F<hfont> -L<lines> -p<outfile> -T<n> --add-to-space <units>
--add-to-width <units> --columns <n> --detect --first-page <n> --kern <file.afm> --last-page <n>
--(heading|footing)-(left|center|right) <string> --margin-(top|bottom|left|right) <inches>
--no-eject-(file|formfeed) --spacing <n> [gs options] [files]
gsbj [options] [files]
gsdj [options] [files]
gsdj500 [options] [files]
gslj [options] [files]

DESCRIPTION

This utility provides functionality approximately equivalent to the Unix **enscript**(1) program. It prints
plain text files using a single font. It currently handles tabs and formfeeds, but not backspaces. It will
line-wrap when using fixed-pitch fonts. It will also do kerning and width adjustment.

The default device (-sDEVICE=) and resolution (-r) are as follows:

gslp	epson	180
gsbj	bj10e	180
gsdj	deskjet	300
gsdj500	djet500	300
gslj	laserjet	300

By default the current date is formatted as the center header.

OPTIONS

Standard switches implemented:

-12BclqRr -b<header> -f<font> -F<hfont> -L<lines> -p<outfile>

Sun switches implemented:

-T<n>   set tab width

Switches ignored:

-GghKkmow -# -C -d -J -n -P -S -s -t -v

Switches added:

--add-to-space <units>
     add the given number of 1/72" units to the width of each space (may be negative)

--add-to-width <units>
     add the given number of 1/72" units to the width of each character (may be negative)

--columns <n>
     print in <n> columns

--detect
     treat the file as PostScript if it starts with %!

--first-page <n>
     start printing at page <n>

--kern <file.afm>
     kern using information from the given .AFM file

--last-page <n>
     stop printing after page <n>

--(heading|footing)-(left|center|right) <string>
     set the heading/footing fields; use -B first to clear

--margin-(top|bottom|left|right) <inches>
     set a margin

--no-eject-(file|formfeed)
     end-of-file/FF only starts a new column, not a new sheet

--spacing <n>
     use double (n=2), triple (n=3), etc. spacing
Also, the string %# in a heading or footing is replaced with the page #.
