

**NAME**

**gss\_release\_oid\_set** - Discard a set of object identifiers

**SYNOPSIS**

```
#include <gssapi/gssapi.h>
```

```
OM_uint32
```

```
gss_release_oid_set(OM_uint32 *minor_status, gss_OID_set *set);
```

**DESCRIPTION**

Free storage associated with a GSS-API generated `gss_OID_set` object. The `set` parameter must refer to an OID-set that was returned from a GSS-API routine. `gss_release_oid_set()` will free the storage associated with each individual member OID, the OID set's elements array, and the `gss_OID_set_desc` itself.

Implementations are encouraged to set the `gss_OID_set` parameter to `GSS_C_NO_OID_SET` on successful completion of this routine.

**PARAMETERS**

`minor_status` Mechanism specific status code.

`set` The storage associated with the `gss_OID_set` will be deleted.

**RETURN VALUES**

`GSS_S_COMPLETE` Successful completion

**STANDARDS**

RFC 2743 Generic Security Service Application Program Interface Version 2, Update 1

RFC 2744 Generic Security Service API Version 2 : C-bindings

**HISTORY**

The `gss_release_oid_set` function first appeared in FreeBSD 7.0.
