Functions

int **hx509_verify_signature** (hx509_context context, const hx509_cert signer, const AlgorithmIdentifier *alg, const heim_octet_string *data, const heim_octet_string *sig)

Detailed Description**Function Documentation**

int hx509_verify_signature (hx509_context context, const hx509_cert signer, const AlgorithmIdentifier *alg, const heim_octet_string * data, const heim_octet_string * sig)

Verify a signature made using the private key of an certificate.

Parameters:

context A hx509 context.

signer the certificate that made the signature.

alg algorithm that was used to sign the data.

data the data that was signed.

sig the signature to verify.

Returns:

An hx509 error code, see **hx509_get_error_string()**.
