

NAME

d2i_PKCS8PrivateKey_bio, d2i_PKCS8PrivateKey_fp, i2d_PKCS8PrivateKey_bio,
i2d_PKCS8PrivateKey_fp, i2d_PKCS8PrivateKey_nid_bio, i2d_PKCS8PrivateKey_nid_fp - PKCS#8
format private key functions

SYNOPSIS

```
#include <openssl/evp.h>
```

```
EVP_PKEY *d2i_PKCS8PrivateKey_bio(BIO *bp, EVP_PKEY **x, pem_password_cb *cb, void *u);
EVP_PKEY *d2i_PKCS8PrivateKey_fp(FILE *fp, EVP_PKEY **x, pem_password_cb *cb, void *u);
```

```
int i2d_PKCS8PrivateKey_bio(BIO *bp, const EVP_PKEY *x, const EVP_CIPHER *enc,
    char *kstr, int klen,
    pem_password_cb *cb, void *u);
```

```
int i2d_PKCS8PrivateKey_fp(FILE *fp, const EVP_PKEY *x, const EVP_CIPHER *enc,
    char *kstr, int klen,
    pem_password_cb *cb, void *u);
```

```
int i2d_PKCS8PrivateKey_nid_bio(BIO *bp, const EVP_PKEY *x, int nid,
    char *kstr, int klen,
    pem_password_cb *cb, void *u);
```

```
int i2d_PKCS8PrivateKey_nid_fp(FILE *fp, const EVP_PKEY *x, int nid,
    char *kstr, int klen,
    pem_password_cb *cb, void *u);
```

DESCRIPTION

The PKCS#8 functions encode and decode private keys in PKCS#8 format using both PKCS#5 v1.5 and PKCS#5 v2.0 password based encryption algorithms.

Other than the use of DER as opposed to PEM these functions are identical to the corresponding **PEM** function as described in **PEM_read_PrivateKey(3)**.

NOTES

These functions are currently the only way to store encrypted private keys using DER format.

Currently all the functions use BIOS or FILE pointers, there are no functions which work directly on memory: this can be readily worked around by converting the buffers to memory BIOS, see **BIO_s_mem(3)** for details.

These functions make no assumption regarding the pass phrase received from the password callback. It will simply be treated as a byte sequence.

RETURN VALUES

d2i_PKCS8PrivateKey_bio() and **d2i_PKCS8PrivateKey_fp()** return a valid **EVP_PKEY** structure or **NULL** if an error occurred.

i2d_PKCS8PrivateKey_bio(), **i2d_PKCS8PrivateKey_fp()**, **i2d_PKCS8PrivateKey_nid_bio()** and **i2d_PKCS8PrivateKey_nid_fp()** return 1 on success or 0 on error.

SEE ALSO

PEM_read_PrivateKey(3), **passphrase-encoding(7)**
