

**NAME****isrune, isrune\_l** - valid character test**LIBRARY**

Standard C Library (libc, -lc)

**SYNOPSIS**

#include &lt;ctype.h&gt;

*int***isrune**(*int c*);*int***isrune\_l**(*int c, locale\_t loc*);**DESCRIPTION**

The **isrune()** and **isrune\_l()** functions test for any character that is valid in the current character set. In the ASCII character set, this is equivalent to **isascii()**.

The **isrune\_l()** function takes an explicit locale argument, whereas the **isrune()** function uses the current global or per-thread locale.

**RETURN VALUES**

The **isrune()** and **isrune\_l()** functions return zero if the character tests false and return non-zero if the character tests true.

**COMPATIBILITY**

The 4.4BSD extension of accepting arguments outside of the range of the *unsigned char* type in locales with large character sets is considered obsolete and may not be supported in future releases. The **iswrune()** or **iswrune\_l()** function should be used instead.

**SEE ALSO**

ctype(3), ctype\_l(3), isascii(3), iswrune(3), iswrune\_l(3), xlocale(3), ascii(7)

**HISTORY**

The **isrune()** function appeared in 4.4BSD.
