

**NAME****isspecial, isspecial\_l** - special character test**LIBRARY**

Standard C Library (libc, -lc)

**SYNOPSIS**

#include &lt;ctype.h&gt;

*int***isspecial**(*int c*);*int***isspecial\_l**(*int c, locale\_t loc*);**DESCRIPTION**

The **isspecial()** and **isspecial\_l()** functions test for a special character.

The **isspecial\_l()** function takes an explicit locale argument, whereas the **isspecial()** function uses the current global or per-thread locale.

**RETURN VALUES**

The **isspecial()** and **isspecial\_l()** functions return zero if the character tests false and return non-zero if the character tests true.

**COMPATIBILITY**

The 4.4BSD extension of accepting arguments outside of the range of the *unsigned char* type in locales with large character sets is considered obsolete and may not be supported in future releases. The **iswspecial()** or **iswspecial\_l()** function should be used instead.

**SEE ALSO**

ctype(3), ctype\_l(3), iswspecial(3), iswspecial\_l(3), xlocale(3)

**HISTORY**

The **isspecial()** function appeared in 4.4BSD.
