NAME

kgetcred - get a ticket for a particular service

SYNOPSIS

```
kgetcred [--canonicalize] [-c -cache | --cache=cache] [-e enctype | --enctype=enctype] [--no-transit-check] [--version] [--help] service
```

DESCRIPTION

kgetcred obtains a ticket for a service. Usually tickets for services are obtained automatically when needed but sometimes for some odd reason you want to obtain a particular ticket or of a special type.

Supported options:

--canonicalize

requests that the KDC canonicalize the principal.

-c cache, --cache=cache

the credential cache to use.

-e enctype, --enctype=enctype

encryption type to use.

--no-transit-check

requests that the KDC doesn't do transit checking.

--version

--help
