

NAME

krb5_getportbyname - get port number by name

LIBRARY

Kerberos 5 Library (libkrb5, -lkrb5)

SYNOPSIS

```
#include <krb5.h>
```

int

```
krb5_getportbyname(krb5_context context, const char *service, const char *proto, int default_port);
```

DESCRIPTION

krb5_getportbyname() gets the port number for *service* / *proto* pair from the global service table for and returns it in network order. If it isn't found in the global table, the *default_port* (given in host order) is returned.

EXAMPLE

```
int port = krb5_getportbyname(context, "kerberos", "tcp", 88);
```
