

**NAME**

**krb5\_is\_thread\_safe** - is the Kerberos library compiled with multithread support

**LIBRARY**

Kerberos 5 Library (libkrb5, -lkrb5)

**SYNOPSIS**

```
#include <krb5.h>
```

```
krb5_boolean
```

```
krb5_is_thread_safe(void);
```

**DESCRIPTION**

**krb5\_is\_thread\_safe** returns TRUE if the library was compiled with multithread support. If the library isn't compiled, the consumer have to use a global lock to make sure Kerberos functions are not called at the same time by different threads.
