

**NAME**

`ldns_verify`, `ldns_verify_rrsig`, `ldns_verify_rrsig_keylist`, `ldns_verify_rrsig_keylist_notime`,  
`ldns_verify_notime` - verify rrsigs

**SYNOPSIS**

```
#include <stdint.h>
#include <stdbool.h>

#include <ldns/ldns.h>

ldns_status ldns_verify(ldns_rr_list *rrset, ldns_rr_list *rrsig, const ldns_rr_list *keys, ldns_rr_list
*good_keys);

ldns_status ldns_verify_rrsig(ldns_rr_list *rrset, ldns_rr *rrsig, ldns_rr *key);

ldns_status ldns_verify_rrsig_keylist(ldns_rr_list *rrset, ldns_rr *rrsig, const ldns_rr_list *keys,
ldns_rr_list *good_keys);

ldns_status ldns_verify_rrsig_keylist_notime(const ldns_rr_list *rrset, const ldns_rr *rrsig, const
ldns_rr_list *keys, ldns_rr_list *good_keys);

ldns_status ldns_verify_notime(ldns_rr_list *rrset, ldns_rr_list *rrsig, const ldns_rr_list *keys,
ldns_rr_list *good_keys);
```

**DESCRIPTION**

*ldns\_verify()* Verifies a list of signatures for one rrset.

**rrset:** the rrset to verify

**rrsig:** a list of signatures to check

**keys:** a list of keys to check with

**good\_keys:** if this is a (initialized) list, the pointer to keys from keys that validate one of the  
signatures are added to it

Returns status LDNS\_STATUS\_OK if there is at least one correct key

*ldns\_verify\_rrsig()* verify an rrsig with 1 key

**rrset:** the rrset

**rrsig:** the rrsig to verify

**key:** the key to use

Returns status message whether verification succeeded.

*ldns\_verify\_rrsig\_keylist()* Verifies an rrsig. All keys in the keyset are tried.

**rrset:** the rrset to check

**rrsig:** the signature of the rrset

**keys:** the keys to try

**good\_keys:** if this is a (initialized) list, the pointer to keys from keys that validate one of the signatures are added to it

Returns a list of keys which validate the rrsig + rrset. Returns status LDNS\_STATUS\_OK if at least one key matched. Else an error.

*ldns\_verify\_rrsig\_keylist\_notime()* Verifies an rrsig. All keys in the keyset are tried. Time is not checked.

**rrset:** the rrset to check

**rrsig:** the signature of the rrset

**keys:** the keys to try

**good\_keys:** if this is a (initialized) list, the pointer to keys from keys that validate one of the signatures are added to it

Returns a list of keys which validate the rrsig + rrset. Returns status LDNS\_STATUS\_OK if at least one key matched. Else an error.

*ldns\_verify\_notime()* Verifies a list of signatures for one rrset, but disregard the time. Inception and Expiration are not checked.

**rrset:** the rrset to verify

**rrsig:** a list of signatures to check

**keys:** a list of keys to check with

**good\_keys:** if this is a (initialized) list, the pointer to keys from keys that validate one of the signatures are added to it

Returns status LDNS\_STATUS\_OK if there is at least one correct key
