

NAME

libinput-quirks - quirk debug helper for libinput

SYNOPSIS

libinput quirks list [--data-dir */path/to/dir*] [--verbose] */dev/input/event0*

libinput quirks validate [--data-dir */path/to/dir*] [--verbose]

libinput quirks --help

DESCRIPTION

The **libinput quirks** tool interacts with libinput's quirks database.

When invoked as **libinput quirks list**, the tool lists all quirks applied to the given device.

When invoked as **libinput quirks validate**, the tool checks for parsing errors in the quirks files and fails if a parsing error is encountered.

This is a debugging tool only, its output and behavior may change at any time. Do not rely on the output.

OPTIONS

--data-dir */path/to/dir*

Use the given directory as data directory for quirks files. When omitted, the default directories are used.

--help Print help

--verbose

Use verbose output, useful for debugging.

LIBINPUT

Part of the **libinput(1)** suite
